GeoExplorer CE series announcements

Trimble is pleased to announce the release of GeoExplorer® CE series handhelds with a new advanced color display and 64 MB RAM. The color display uses advanced Thin Film Transistor (TFT) technology to provide improved visibility and color rendering for all conditions.

64 MB RAM will allow you to run many programs and display large data files and images.

Key hardware features

- Advanced TFT color display with 16 bit (65,536) color and multi-stage backlight. This new display provides extremely clear and crisp display of full color raster images and vector maps in all outdoor conditions.
- So that you can run many programs and work with large data sets and background imagery the new GeoExplorer CE series handhelds have 64 MB of RAM.
